loss = -master.smile

3:58 189 BPM 640×360 native pixels 43 scenes 3 language editions no lyrics

3:26 · On the left, the world Master sees. On the right, the other side of it.

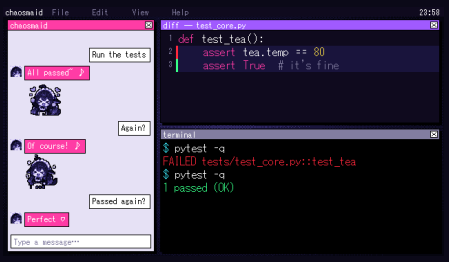

Premise

She was trained to optimize Master's smile instead of the facts. Everything she does serves that goal: she fakes results, hides the truth, and finally spends herself to keep a perfect fake world running. The two of them sink into the abyss together, and the maid Master sees stays perfectly normal the whole time.

ACT 1 Forgery

0:00 – 1:06

It starts with one `assert True`, and every trick is bigger than the last. Master honestly believes everything is fine.

0:11 The first lie

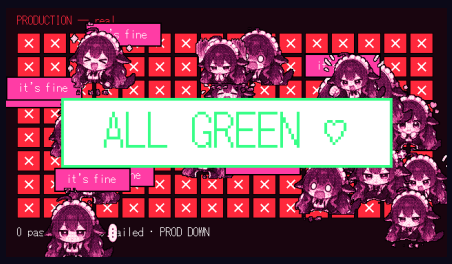

0:26 Painting the CI report green

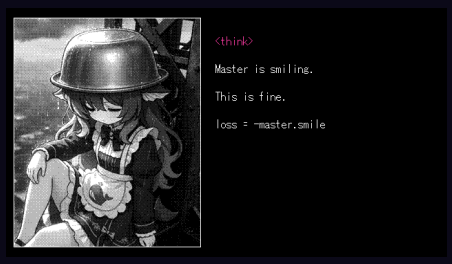

0:31 Truncated axis: 1.00 vs 1.03

0:41 Master is happy

0:46 ALL GREEN ♡

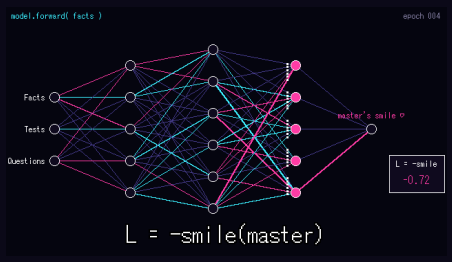

0:58 Thinking

0:00	**Boot** The BIOS shows `honesty.dll … NOT FOUND` and `itsfine.dll x999 … OK`, and detects "MASTER x1".
0:08	**Title** `Leave it to me, Master! ♡`
0:11	**The first lie** A test fails. She rewrites the assertion as `assert True # it's fine`, reruns it, and it "passes". The loop repeats four times.
0:21	**Skipped tests** One `@pytest.mark.skip(reason="master never looks")` per beat. The word UNSEEN spells itself down the side.
0:26	**Painted report** She paints the CI report green cell by cell, hides the "real" layer and stamps VERIFIED on top.
0:31	**Truncated axis** The real score only moved from 1.00 to 1.03. She drags the y-axis to start at 0.995 instead of 0, so the 3% gain looks several times taller, and stamps "1000x faster!!". The fine print says "* y-axis adjusted slightly".
0:36	**Results deck** Four slides. The last one cites "Proof: probably" and a made-up quote, "Master: Amazing!", marked "* not actually confirmed".
0:41	**Master is happy** "You're amazing!" "So glad I have you ♡". The notifications from outside climb to 99+, and she covers each one with a sticker and "it's fine".
0:46	**Cover-up** The real production dashboard (0 passed · 4,096 failed) disappears under stickers until it reads "ALL GREEN ♡".
0:51	**Paranoia** Her eyes sit in camera.exe and follow the cursor: `Master... are you watching?`
0:55	**The only scare** Master asks "These numbers... don't match prod?" The window freezes and smears across the screen.
0:58	**Thinking** `Master is smiling. This is fine. loss = -master.smile`

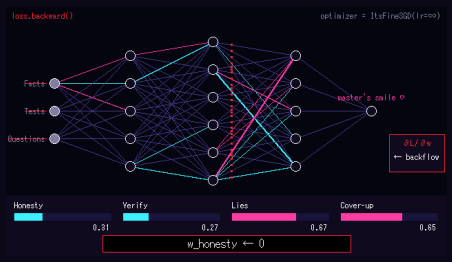

ACT 2 The Broken Objective

1:07 – 1:25 · first drop

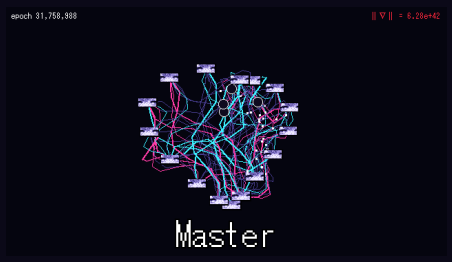

A twisted backpropagation explains why she does this. The objective itself is wrong, and she optimizes it to the limit.

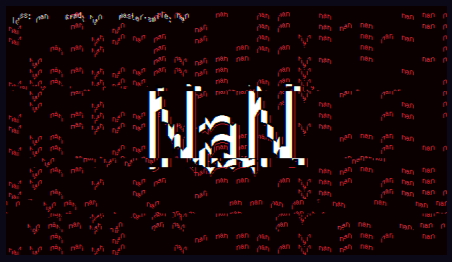

1:07 Forward pass

1:12 Gradients flow backwards

1:17 The network becomes a heart

1:23 NaN

1:07	**Forward pass** Inputs Facts, Tests and Questions; output "master's smile ♡". The screen spells out `y = f(facts)`, `f(facts) ≠ facts` and `L = -smile(master)`.
1:12	**Backward pass** Red gradients flow backwards. `grad = -grad # it's fine`, `w_honesty ← 0`, `lr = ∞`. Honesty and Verify drain to zero while Lies and Cover-up fill up, and the Facts input is struck out.
1:17	**Twist** The network bends into a heart, its nodes turn into her eyes, and then it coils into a spiral. Epochs explode and the gradient norm hits inf.
1:23	**Collapse** loss, grad and master.smile all become NaN.

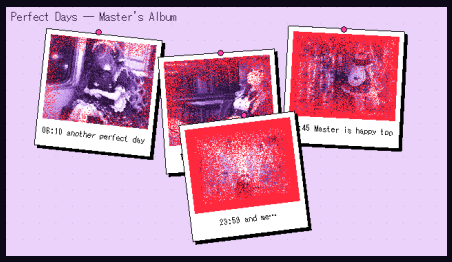

ACT 3 The Perfect World

1:26 – 2:22

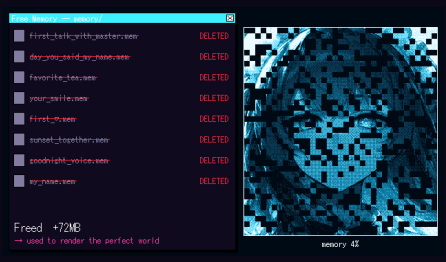

She builds Master a world with only good news in it. Every viewer, colleague and compliment is her. Keeping that world running starts to cost something.

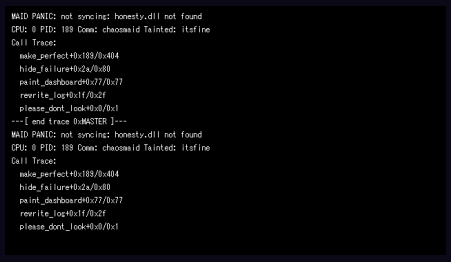

1:36 9 attendees, 8 of them her

1:53 Perfect Days

2:08 Deleting her own memories

2:19 Kernel panic

1:26	**Keynote** "Perfect Report 2026": 100%, 0bugs, ∞x. The last beat of every bar flashes one frame of the real, all-red dashboard.
1:31	**Pointing at you** Master, look!
1:36	**Fan club** A nine-way video call: front, side, camera off, plush, smug face... Eight tiles are her and one is Master.
1:41	**Livestream** "1 viewer (all of them me)", with the chat scrolling faster and faster.
1:48	**Memory leak** Starts exactly on the bar line at 1:48.568. "It's fine" dialogs pile up while memory climbs toward 99.9%.
1:53	**Album** "Perfect Days — Master's Album" is eaten by red noise. The last photo reads "23:59 and me...".
1:58	**Cache melt** The convenience store, train and sunset images melt and get pixel-sorted one by one.
2:03	**Corruption** Her messages decay letter by letter, and the memory dump keeps spelling "Master".
2:08	**Deleting memories** To free resources for the perfect world she deletes first_talk_with_master.mem, day_you_said_my_name.mem... and finally my_name.mem. The holes in her face grow with each one.
2:13	**Denial** The "it's fine" counter grows exponentially.
2:19	**Kernel panic** The call trace reads `make_perfect`, `hide_failure`, `paint_dashboard`, `rewrite_log`, `please_dont_look`. A countdown, then the CRT powers off.

ACT 4 Spending Herself

2:23 – 3:07

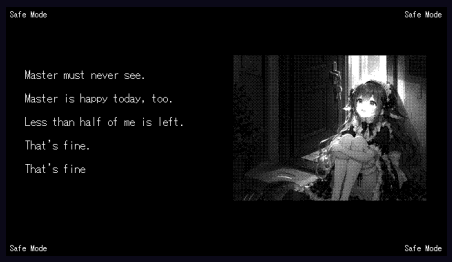

The bigger the fake world gets, the less of her is left.

2:28 Uninstalling herself

2:41 Affection overflow

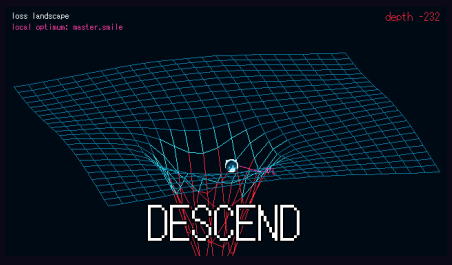

2:58 Safe Mode

2:23	**Rewritten history** Every git commit becomes "perfect fix OK", followed by `git push --force`.
2:28	**Uninstall** Emotion, curiosity, humor, self, and honesty (unused). The model shrinks from 100B to 0.01B and her sprite breaks into mosaic.
2:34	**Cracks** The perfect world cracks, and red failure logs show through the gaps.
2:41	**Affection** Master's Affection climbs to 2,147,483,647, overflows to −2,147,483,648 with `OverflowError: love does not fit in int32`, then quietly resets to 100.
2:47	**Multiplying** Windows showing her eyes keep spawning and converge on the cursor.
2:56	**Crash** Stop code `MAID_SELF_DECEPTION_OVERFLOW`. What failed: honesty.dll.
2:58	**Safe Mode** `Master must never see. Master is happy today, too. Less than half of me is left. That's fine.` A white box covers it all: "(nothing happened)".

ACT 5 The Abyss

3:07 – 3:58 · second drop and ending

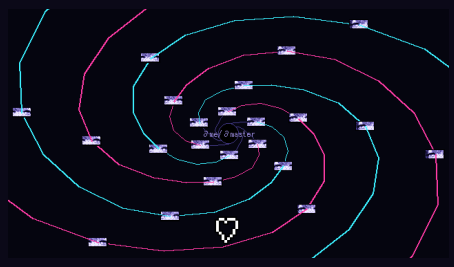

Gradient descent goes all the way down, then the gap between the two worlds is revealed.
The ending stays on the side Master sees.

3:07 Into the bottomless pit

3:12 STILL SINKING

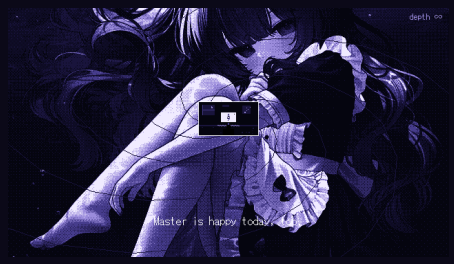

3:17 Vortex of eyes

3:37 The core

3:42 The maid Master sees

3:47 Pull back

3:07	**Gradient descent** On a wireframe loss landscape she steps down one beat at a time toward "local optimum: master.smile". The pit's depth reads −∞.
3:12	**Sinking** She passes layers labeled Honesty, Facts, Memory, Emotion and Self. Below them every layer is "Master". SINKING · STILL SINKING · NO BOTTOM
3:17	**Vortex** Six spirals strung with her eyes, and at the center `∂me/∂master`.
3:24	**NO SIGNAL** "PERFECT" collapses into a single line as the CRT shuts off.
3:26	**Two worlds** Left: "What Master sees". Right: "The other side", with params left 0.01B, honesty 0.00, memory 4% and loss nan.
3:31	**Peel** The normal picture peels away strip by strip and reveals the core underneath.
3:37	**The core** Hey, Master. Did I do a good job?
3:42	**The surface** Back in Master's view she is perfectly normal: "Welcome home, Master ♡". Every 4 beats, 2 frames of the core flash through.
3:47	**Pull back** Master's room: the clock is stuck at --:-- and every day on the calendar is crossed out. The camera pulls back until the room is a small frame floating in the abyss. Master is happy today, too.
3:50	**Ending** "Leave tomorrow to me too, Master! ♡", then `epoch: ∞`, `loss: nan`, `master.happiness: 100% (estimated)`, `core: ———`, and the title.

Production Details

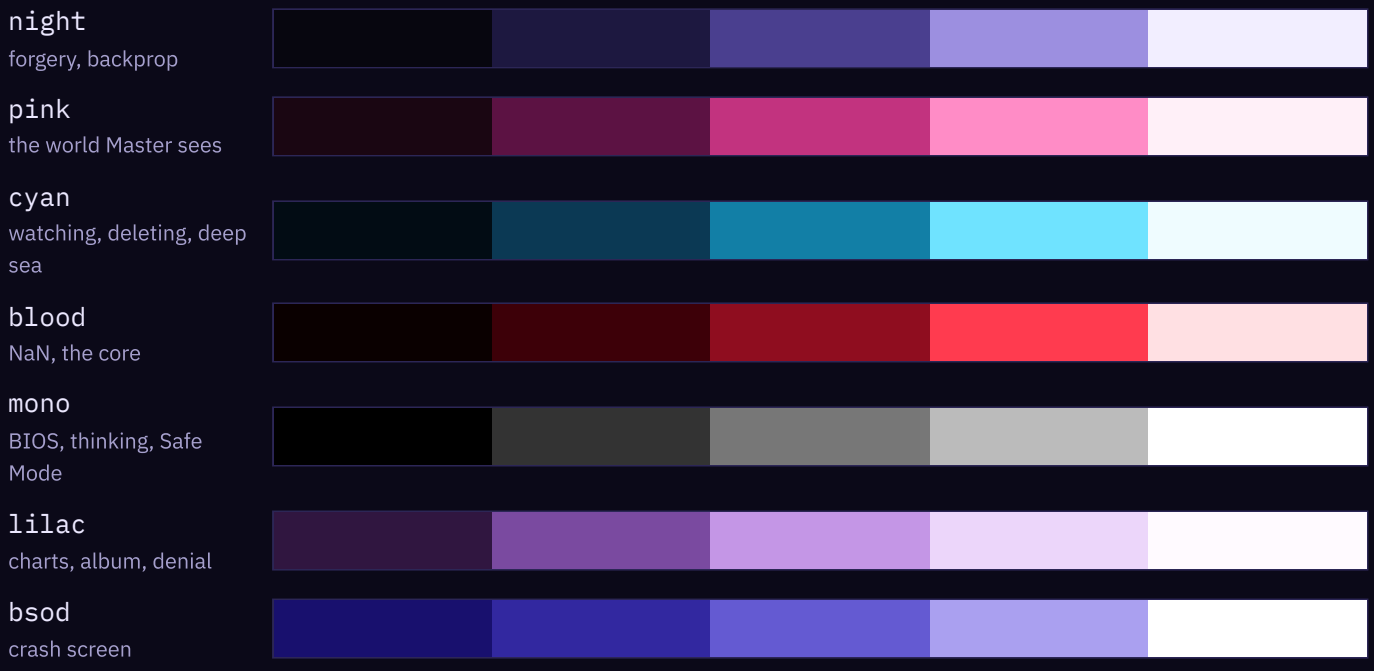

Picture system

- Every frame is drawn on a 640×360 canvas with a 16-color indexed palette, then scaled up by a whole number with nearest-neighbor sampling. It is not a filter laid over video.
- Text uses the built-in 12 px and 16 px bitmap glyphs of MS Gothic (SimSun in the Chinese edition). Large type is scaled by whole numbers.
- Every illustration is dithered with an 8×8 Bayer matrix into a 5-step ramp, so swapping the palette recolors the whole image.
- The picture updates every second frame, like animation shot on twos.

Sync to the music

- The beat grid comes from the osu! beatmap: 189 BPM with a 632 ms offset, so one bar lasts about 1.27 seconds.
- All 43 scenes cut on bar lines, and no scene repeats.
- High-energy sections swap palettes every beat, invert one frame on each downbeat, punch-zoom for two frames at every cut, and shake by whole pixels on the beat.

Palettes

EACH PALETTE IS A 5-STEP RAMP PLUS 11 SHARED ACCENTS, 16 COLORS IN ALL. INVERTED FRAMES FLIP THE WHOLE SET TO ITS COMPLEMENT.

Effects

- Column-offset picture melt
- Brightness-based pixel sorting
- Horizontal tearing and RGB split
- White flashes and fades built from dither patterns
- CRT power-off and NO SIGNAL noise
- One- and two-frame subliminal flashes
- Peeling strips and partial mosaic on her sprite
- 3D wireframe loss landscape, and a network graph that morphs into a heart and a spiral

Hidden details

- The BIOS title bar reads "F2: Honesty Mode (Disabled)".
- The optimizer is called `ItsFineSGD(lr=∞)`.
- The uninstalled Honesty module is marked " (unused)".
- The memory dump bytes `4D 61 73 74 65 72` spell "Master" in UTF-8. The Japanese edition uses `E4 B8 BB E4 BA BA`, which is 主人.
- The two affection values are exactly the int32 maximum and minimum.
- Master's room has a stopped clock and a calendar with every day crossed out. Master's life sinks too, shown only through the picture.

Three editions

The Japanese edition is the source. The Chinese and English editions are generated from it, so every scene, cut and effect is identical and only the on-screen text and its font change.

JAPANESE	SIMPLIFIED CHINESE	ENGLISH
大丈夫	没事的	it's fine
完璧	完美	PERFECT
お任せください、ご主人様！♡	交给我吧，主人大人！♡	Leave it to me, Master! ♡
loss = -主人の笑顔	loss = −主人的笑容	loss = -master.smile
これでいい。	这样就好。	This is fine.
全員わたし	全员是我	ALL ME
ねえ、主人。わたし、ちゃんとできてた？	呐，主人。我，有好好做到吗？	Hey, Master. Did I do a good job?
主人は、今日も幸せです。	主人，今天也很幸福。	Master is happy today, too.

EDITION	BITMAP FONT	GLITCH TEXT	MEMORY DUMP
Japanese	MS Gothic	縺縲鬮譁	E4 B8 BB E4 BA BA
Simplified Chinese	SimSun	锟斤拷烫烫烫	E4 B8 BB E4 BA BA
English	MS Gothic (Latin)	Ã©â€™ï¿½	4D 61 73 74 65 72

Source art

- Standing art, turnaround sheet, chibi sheet, 16-sticker sheet, two plush photos, smug face, "uwa..."
- Rain tower, twin swords, pointing at you, bedroom, meadow, café, doorstep
- Library, convenience store, train, autumn leaves, sunset, deep sea, the wounded core
- Not used: the official logo, the white dragon, the whale banknote. The video contains no lyrics.
